## Fish body project to chart climate change

A NEW Tasmanian Aquaculture and Fisheries Institute project aims to explain to Tasmanians what climate change means to them.

The institute has been awarded a Tasmanian Community Fund grant to conduct a Coastal Climate Change Range Extension Database and MAPPING Project, or REDMAP.

TAFI is a joint venture between the University of Tasmania and the Depart-

ment of Primary Industries and Water.

REDMAP, an interactive website, will encourage the public to report sightings of marine species, which may be moving because of warming waters along the coastline.

Interested members of the community including divers, recreational and commercial fishers and schools can call the REDMAP team for information on 6227 7262.
